Reflections upon the Midlands-wide SABR study day, 16th May 2024

The spine session by the folks from Clatterbridge was one of the highlights

People really seemed to engage in the group discussions

I think overall the success of the day is best described by how departments can learn from each other's service, what works, what doesn't, what equipment and imaging people use

One clinical lead described it as a "**roaring success**" and one of our sponsors said "**It was absolutely incredible**"

Insights into each department's pathway seems to be the thing that engaged most people. It's both reassuring if they do similar and inspiring if there's differences

It was nice that the focus is shifting to motion management and oligoprogression so looking more at sort of advanced SABR and pushing the limits of what we can do
